RISK MANAGEMENT AND SAFEGUARDING OF EXISTING ENVIRONMENT

The FIRESPELL project is implemented within the framework of the Interreg Italy - Croatia program and aims to make emergency management systems (EMS) more effective, improving the preparation and coordination of those actors involved in the management of natural and anthropogenic disasters, hence strengthening citizen awareness of risk prevention and crisis management.

The project, led by the RERA SD agency of the Split county, is addressed by the experience of the **Agency for the Reconstruction of the Emilia-Romagna Region** in so many years of reconstruction of the built heritage after the 2012 Emilia-Romagna earthquake. The project implementation gives great importance to safeguarding the built heritage of the territory, analyzing new technological and organizational solutions for the damage management, and the governance necessary to ensure efficiency and effectiveness of the restoration activities. In fact, the preservation of memory represents a fundamental element of the identity of the involved places and the communities' belongingness, an important legacy to the next generations to build a sustainable future.

With this significant perspective, as member of the FIRESPELL partnership, the Agency for Reconstruction coordinates the Task Force dedicated to the management of seismic and fire risks, with the contribution of partners from Italian regions (i.e., Abruzzo, Puglia, and Veneto) and the Croatians counties (i.e., Zadar and Sibenik-Knin). Within the framework of Work Package 4, dedicated to emergency management systems strengthening, the Task Force designs and implements pilot actions that promote the use of innovative tools and solutions, as well as training actions, functional to make risks and crises management more effective.

The results will be capitalized by modeling the experiences achieved by each partner, with particular attention to strengthening governance systems. Following the identification and the scheduling of the pilot actions by all the Task Force partners, with today's seminar, the Agency for Reconstruction aims to strengthen the networks that share the interest in these risk categories, promoting the good practices exchange and the knowledge transfer on the topic of disaster response, with particular attention to safeguarding cultural heritage, as a fundamental public value for local communities.
